Re: FCT® Seminar

To all distinguished and otherwise members of FCT:

By (allegedly) popular demand nearing tidal proportions, there have been requests for more hands-on training.

In my earnest attempts of being sensitive to the issue, I have contacted the same 300-star hotel, The Crowne Plaza in White Plains, New York where we had our last synod in October '07, in order to check possible weekend vacancies for this October. One of the few vacancies – 10.17.09 – 10.18.09 seems to be most appealing that pending a sufficient student response, I intend to book. The venue will be the same – environmentally healthy and appealing as it contains many windows, instead of windowless four partition cages, and is free of fluorescent lighting that normally provokes me into uncontrolled violence.

The hotel group rate, held for a limited period, is lower this time - \$119 per night for a two double-bed room, perhaps, allowing some of you to split the night dues with a partner or a pet.

The attendance or SY Y IHS Ltd. part of the compensation to enable me to meet my medical expenses following the event is \$395, per person.

The least important part, the program itself, will center almost exclusively on patient's management including the hands-on and detailed analysis of cases including all of the possible "right" and "wrong" scenarios. I will sacrifice quite a few sick and diverse patients from my practice to meet the objective and, likewise, encourage you to bring your own, if you wish. You may present your difficult cases, too. However, the number of these would have to be limited for

time's sake and the cases be prescreened by me to make sure that these carry sufficient edifying value.

The only theoretical, but, I feel, necessary part might concern a broader essence of BRT, in general, than its being a mere mechanical procedure. Systemic memory, material and immaterial, i.e., physical vs. non-physical, local and nonlocal and its other equally schizoid aspects will be touched upon. Also, actual formation and contents of mental software of practitioner and, even a possible creation of practitioner-patient unique medical/healing reality that entangles not only two of them but all of his patients elsewhere. This involves quantum physics and beyond theories concerning universal consciousness/information/energy. For our practical purposes, how this reality may play to everyone's benefit or detriment.

Getting back to the practical part, several goals are in pursuit:

1. To perceive the testing process as simply an intelligence, CIA type of information gathering.
2. Integrating our theory rules with patient's individual state in prioritizing this information.
3. Assigning proper value and acting accordingly in relation to the findings, e.g., the very first finding may have to be addressed last, and the very last, first.
4. Addressing as many morbid layers of each split organ as possible, including both toxicological, infectious and other agents, in the same treatment, while avoiding an overload.
5. Using D & R for therapy enhancing purposes with **infectious** isodes.
6. Should we go beyond 10MM potency and how and why?
7. Integrating all of the salient aspects of FCT learned so far.

8. Any worthy testing and therapy requests of yours for this event are dearly welcomed and will be incorporated into the program, as deems fit.
9. Upgrading the clinical value of two constituents of FCT theory of chronic diseases – EMFs and parasitosis. Recall the circle in the Basic course. Numerous morbid properties of EMFs which can elude conventional EMF measuring devices.
10. Certainly, between now and then, other additions to the program will be made.
11. No exhaustive program details are capable of anticipating the plethora of useful information that actual patient's cases usually elicit in the process of testing and analysis.

The registration forms are attached. Those of you who've been there, do know that space is "limited" indeed. So, book early so that we can do the same with the hotel's venue.

See you soon and regards to all,

Boss
